

# API Testing Basics with Postman

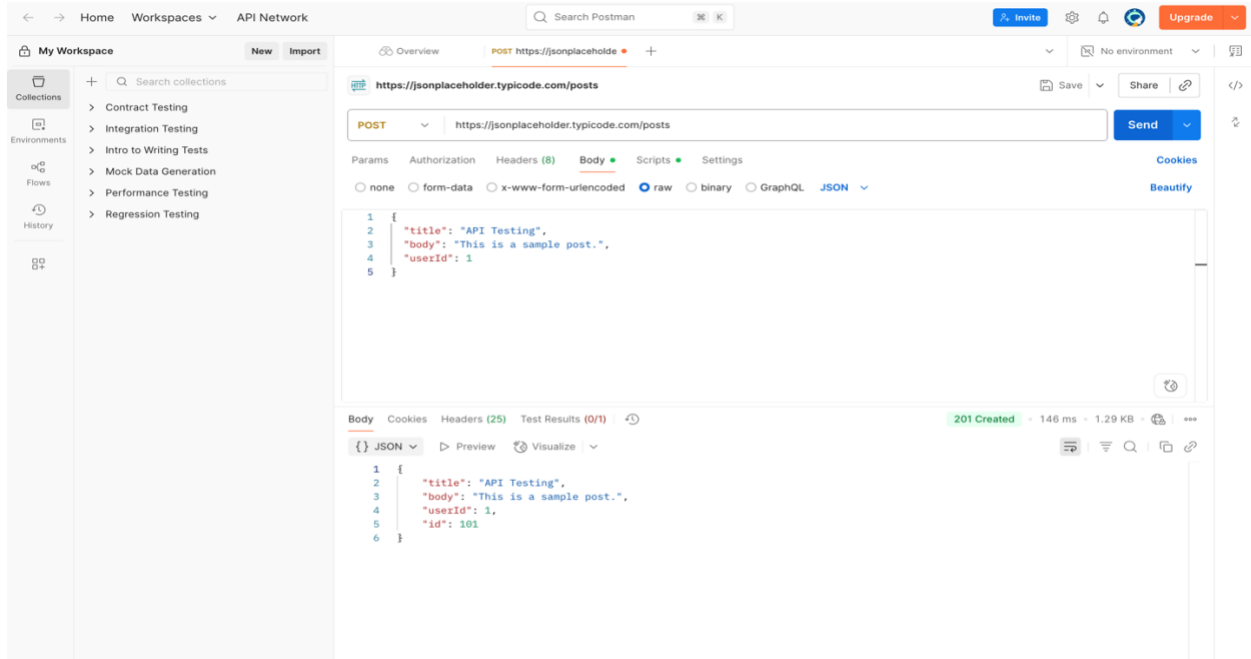

## 1. GET /posts: Retrieve a list of posts and confirm a status code of 200 OK.

I used this <https://jsonplaceholder.typicode.com/posts> link to send “GET” command. I received response with status code of **200 OK** (List retrieved successfully).

## 2. POST /posts: Create a new post using this JSON body:

I used this <https://jsonplaceholder.typicode.com/posts> link to send “POST” command. I received response with status code of **201 Created** (Post created with correct body).

### 3. DELETE /posts/1: Delete a post and confirm a 200 OK or 204 No Content response.

I used this <https://jsonplaceholder.typicode.com/posts/1> link to send “DELETE” command. I received response with status code of **200 OK** (Post deleted successfully).
